## LETTER OF RECOMMENDATION

---

To Whom It May Concern,

I am delighted to recommend **Naman Jain**, a student of the IMG Branch (B.Tech in IT + MBA) at ABV-IIITM Gwalior, who was part of the frontend development team for *Twaran 2025* — the Inter-IIIT Sports Fest organized by our institute.

As a **Frontend Developer**, Naman contributed significantly to building the user interface of the event's registration and management platform. The platform, built using **React.js** and deployed on **Vercel**, supported over 2000 registrations across 26 IIITs. Naman's contributions ensured that the web app was both performant and user-friendly.

He implemented key components such as the registration forms, dynamic dashboards for contingent leaders, and responsive views for participants and officials. His code was consistently clean, modular, and in alignment with the design system laid out in Figma. He also helped resolve cross-browser issues and improved the Lighthouse performance score through lazy loading, asset optimization, and careful component structuring.

Beyond his technical skills, Naman was a collaborative and reliable team member. He worked closely with both the frontend and backend leads, maintained GitHub PR discipline, and actively participated in stand-ups and bug triages during testing and deployment.

Naman's problem-solving approach, coupled with his commitment to quality, makes him a strong candidate for any frontend development opportunity. I strongly recommend him for roles that value thoughtful design, performance, and collaboration.

Sincerely,
